

THE SEAFLEX WATER FILLED TEST WEIGHT

Following the successful introduction of the Seaflex WaterLoad® range of test weights with capacities up to 35 tons, the company has now responded to the demand for a versatile and integrated multi-unit system for testing lighter loads such as lifeboats, elevators and other structures with difficult access.

The system comprises of a series of 375kg water bags coupled to a remote filling and discharge manifold which allows the required load to be applied in spaces where traditional solid weights are difficult to place.

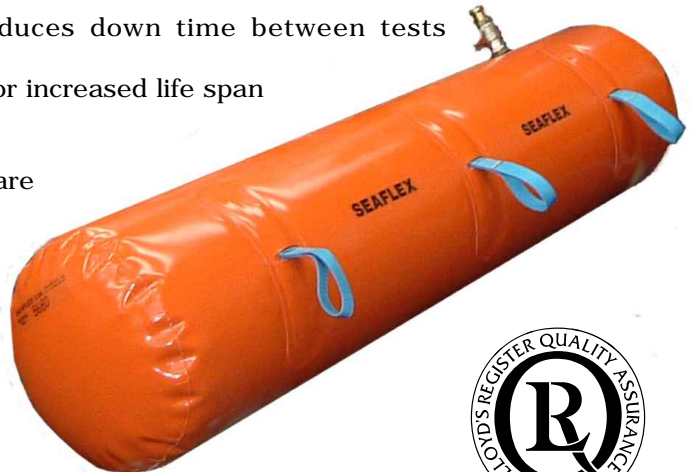

SPECIFICATION:

When Full: Length: 2250mm
Diameter: 485mm
Weight: 375kg

When Empty: Weight: 9kg
Packed Size: 450 x 450 x 200mm

FEATURES OF THE WATER FILLED TEST WEIGHT

- Reduced handling of the full test weight reduces man power requirements and increases safety
- Light dry weight enhances ease of use and reduces down time between tests
- Constructed from advanced performance material for increased life span and reduced risk of damage
- High quality all metal colour coded quick couplings are both extremely robust and easy to use
- Six strong strop attachments ease handling when dry or semi filled to ensure an evenly spread load
- Using multiples of bags gives the user unlimited variants of test weight
- Seaflex in-house manufacturing procedures comply with BS EN ISO9001-2000. Independently assessed and certified by Lloyds Register Quality Assurance.
