

SEAFLEX LIFEBOAT TEST KIT

A complete kit, supplied in transit box (fork lift or crane sling) containing all equipment required to test up to 6.0t in lifeboats, platforms and other structures.

An air driven double diaphragm pump with suction tube fills up to 7 bags simultaneously and is capable of working in hazardous environments.

16 x 375 capacity bags are filled and discharged through the hoses supplied to produce the required test load.

COMPONENTS

Any number of 375KG capacity test weights

1 X 6 way manifold with quick connectors

6 x 1" delivery/discharge hoses

Air driven double diaphragm water pump

Suction & discharge hoses to suit

Extra test bags available

Robust transit storage crate.
